COMMUNITY WELLBEING

**Objective factors**
- **FLUID**
  Perceived as relatively modifiable aspects of community environment.
  E.g. access to benches, crime rates, community centres, green space, housing.

- **FIXED**
  Perceived as relatively non-modifiable aspects of community environment.
  E.g. geographic location and larger political or economic factors, meaning attached to a place.

**Subjective ‘links’ (mechanisms)**
- Perceptions of aspects of the community.
  E.g. perceived safety, social trust, stories about the community, social norms, satisfaction with local amenities.

**Subjective wellbeing**
- Evaluations, thoughts about area.
  E.g. does it seem like a good place to live?
- Feelings, experiences in an area.
  E.g. day to day feelings when located in or thinking about an area.
- Inequality of individual subjective wellbeing in an area and perceptions of community inequalities.

**Individual wellbeing**
- Evaluations, thoughts about life overall.
  E.g. ‘I think my life is going well’.
- Feelings, experiences over lifetimes.
  E.g. how happy people feel right now and if they feel the activities they do in life are meaningful.

* Although we recognise that impacts of health and disability are a product of our context and environments.
